

Requirement Checklist

1. Frontend Development (Website UI/UX)

- **Design Fidelity:** Achieve pixel-perfect replication of the existing majesticmarquees.com design.
- **Technology & Feasibility:**
 - Implement using a modern, efficient technology stack.
 - Complete a feasibility study for converting the current WordPress design structure to the chosen modern framework.
- **Responsiveness & Optimization:**
 - The new site must be fully responsive and optimized for all mobile viewing devices.
 - Ensure fast page load times and optimal performance.
- **Content & Legal:**
 - Maintain and integrate an updated, high-resolution media gallery showcasing various marquee setups and past events.
 - Ensure easy accessibility for all legal and policy pages (T&Cs, Privacy Policy).
- **Lead Generation Focus:**
 - Integrate clear, prominent Call-to-Action (CTA) elements like "Request a Quote" and "Check Availability" on every service page.

2. Data Integration & Lead Management

- **Form Implementation:**
 - Implement all three distinct user submission forms from the current website.
 - Ensure secure and reliable data submission for all forms.
- **CRM Integration (Customer Relationship Management):**
 - Integrate forms to send submitted data directly to the specified CRM system.
 - **Data Mapping:** Automatically map collected fields (Name, Email, Event Type, Date) to specific CRM lead segmentation fields.
 - **Data Quality:** Implement logic to prevent duplicate lead entries.
 - **Automation:** Trigger immediate internal notifications or workflows within the CRM upon submission for rapid follow-up.
- **Apollo.io Integration (Sales Engagement & Enrichment):**
 - Integrate forms to send submitted data to Apollo.io.
 - **Lead Enrichment:** Utilize Apollo.io to gather additional contact and company information post-submission.
 - **Tracking:** Log form submission activity against the contact record for lead source effectiveness tracking.
 - **Outreach:** Enable the immediate initiation of automated outreach sequences based on the form type submitted.

- **Xero Integration:**
 - Integrate Xero send payment details payload to xero then shot payment invoice to customer
- **Pipeline system , contact & calendar (need to confirm)**

Questions for Owner Clarification

- **Technology Stack & Hosting:**
 - Do you have a preferred technology stack, or should the recommendation of React/Laravel (as previously suggested) be used?
 - Where is the current website hosted, and what are the hosting requirements for the new platform (e.g., specific cloud provider, scaling needs)?
- **CRM & Sales Tools:**
 - What is the specific CRM platform currently being used (e.g., Salesforce, HubSpot, custom system)?
 - Which form submissions need to flow into the CRM, and which need to flow into Apollo.io? Are all three forms required for both systems?
 - What are the exact data fields that need to be captured by each of the three forms?
- **Project Scope & Timeline:**
 - Do the three forms represent all lead capture points, or are there other elements like newsletter sign-ups or gated content?
 - What is the target go-live date or expected timeline for project completion?
 - Are there any existing analytics or tracking systems (e.g., Google Analytics, Meta Pixel) that need to be carried over or integrated?
- **Design & Content:**
 - Does the media gallery need a specific content management system (CMS) interface for easy updates, or will content updates be handled via the backend framework?
 - Can we be provided with all high-resolution assets (images, logos) for development? ([we already have](#))

Inventory management

1. Upload csv file
2. And make an invoice from those data we are importing in inventory

3. Use ai and api key
4. Estimate invoice generate
5. Send estimate invoice
6. Accept estimate invoice
7. If accept then invoice goes to xero

Question : which ai api key need to use

Question : worm lead and cold lead what this is meaning how this will be setup in crm and website

Important :

Ai invoice from inventory to make a estimate invoice

1. Create make up site then clone the site again
- 2.
